Technical Skills

Programming Languages: Java, Python, JavaScript, TypeScript, SQL, Kotlin **Frontend:** React.js, Redux, TypeScript, HTML5, CSS3
Backend: Spring Boot, REST APIs, Microservices, Distributed Systems, Kafka, Event-Driven Architecture **APIs & Integration:** API design, REST, JSON, OAuth, GraphQL **Distributed Systems:** Micro-services architecture, asynchronous processing, event-driven workflows **Tools:** Maven, OAuth2, GraphQL, Airflow, AWS Step Functions, Agile/Scrum **AI/LLMs:** OpenAI APIs, prompt engineering, LLM-based feature integration **Databases:** PostgreSQL, MySQL, MongoDB, Snowflake, Redis, Schema Design, Query Optimization **Cloud & DevOps:** AWS (EC2, ECS, Lambda, S3, SQS, SNS), Docker, Kubernetes, Jenkins, CI/CD, Git
Core Concepts: Data Governance, Metadata Platforms, Data Quality, Observability, Scalability, Highly-Available Systems, Failure Handling

Professional Experience

Goldman Sachs	Software Engineer II	May 2024- Present
- Designed and developed scalable Java Spring Boot microservices supporting onboarding, KYC, metadata processing, and risk workflows for global financial platforms. - Built distributed event-driven systems using Apache Kafka to process high-volume client verification, governance, and regulatory workflows. - Developed highly available RESTful APIs focused on scalability, observability, resiliency, and maintainability across cloud-native systems. - Optimized PostgreSQL, MongoDB, and Snowflake data workflows, indexing, and schema design to improve system performance and latency. - Collaborated with product, compliance, legal, and operations teams to translate business requirements into scalable technical solutions. - Built and maintained CI/CD pipelines using Jenkins, Git, Docker, and Kubernetes, improving deployment reliability and automation. - Improved system stability through unit/integration testing, debugging complex distributed issues, and code reviews. - Worked on microservices architecture, failure handling, API integrations, and distributed system design for enterprise-scale platforms. - Defined system trade-offs between scalability, consistency, and maintainability, improving reliability of distributed onboarding services under high load conditions. - Designed and implemented data governance-aware backend services, incorporating metadata tracking, auditability, and lineage-style event processing for regulatory workflows.		

Xpand IT Solutions	Software Development Engineer	January 2023- May 2024
- Built full-stack financial applications using React, TypeScript, Java, and Spring Boot for payment processing and transaction systems. - Designed scalable microservices and event-driven workflows using Kafka and Redis for high reliability and decoupled architecture. - Implemented AWS cloud infrastructure using Docker and Kubernetes for scalable and highly available deployments. - Optimized PostgreSQL, MongoDB, and Snowflake data pipelines for high-volume financial transactions. - Built workflow orchestration using AWS Step Functions and Apache Airflow for automated backend processing systems. - Collaborated in Agile teams to deliver backend services, APIs, observability improvements, and frontend features. - Worked on early-stage data pipeline workflows and service integrations, supporting structured and semi-structured data processing across financial transaction systems. - Implemented role-based access control (RBAC)-style service authorization for securing APIs and internal microservices in payment systems.		

Pioneer Consultancy Services	Software Development Engineer	August 2022- December 2022
- Developed full-stack applications using ReactJS and Java Spring Boot for insurance claims and policy management systems. - Built scalable REST APIs and microservices for claims processing, validation, and policy workflows. - Implemented Kafka-based event-driven systems for asynchronous claim updates and notifications. - Designed and optimized MongoDB schemas for audit tracking and high-performance query execution. - Deployed containerized services using Docker and Kubernetes, collaborating with cross-functional teams to deliver production releases for enterprise insurance and healthcare applications.		

Tata Consultancy Services, India	Assistant Software Engineer	January 2021 – August 2021
- Developed Java-based backend services and REST APIs for enterprise internal platform (Ultimatix). - Improved performance using caching strategies, SQL tuning, and database optimization. - Designed MySQL and MongoDB schemas for scalable enterprise data storage. - Participated in full SDLC including development, testing, deployment, and production support. - Contributed to improving data integrity, access control, and structured enterprise data handling across internal platforms serving large-scale enterprise users.		

Projects

LLM-Powered Financial Insights Assistant
- Built a RAG-based application using Spring Boot, React, OpenAI APIs, and vector databases (FAISS/Pinecone). - Developed backend services for semantic search, prompt orchestration, and AI-driven financial analytics. - Deployed scalable microservices using Docker, Kubernetes, and AWS cloud infrastructure. - Designed metadata-driven RAG architecture with structured ingestion, embedding lifecycle tracking, and retrieval governance considerations for AI-based financial insights systems.

Education

Master of Science in Computer Science	August 2021 – May 2023	University of Central Missouri, Warrensburg, MO
Bachelor of Technology in Computer Science	August 2016 – November 2020	Keshav Memorial Institute of Technology, Hyderabad, IN
